

Cat 1: The Curious One

This fluffy friend is ready to be indexed by Google.
Served via CloudFront /indexable-assets/ → S3 bucket.
Hostname-prefixed key: /www.company.com/cat1.jpg

Cat 2: The Majestic One

Lambda@Edge strips /indexable-assets/ from the path,
then prepends the hostname from x-http-host header.
Result: S3 key becomes /www.company.com/cat2.jpg

Cat 3: The Sleepy One

Once core-infrastructure and cloudfront-deployment PRs are merged, these cats will be publicly indexable at <https://www.company.com/indexable-assets/cat.jpg>
